

MICROSURGICAL CHAIRS

Adapt to support large muscles, reducing work-related neck & back strain

GLOBAL
SURGICAL™ CORPORATION

Unparalleled Ergonomic Support

Feel your best, from the first patient to the last!

Global's Microsurgical Chairs help you transition from macro to micro movements by fully adjusting to match your preferred work style. Neck, back, and shoulder discomfort can be alleviated through proper body support allowing you to make micro movements of the wrists and hands. Once adjusted, the chair can be locked in place to secure your individual positioning.

Two height ranges:

- Standard 16" - 21" (5" piston). Most doctors prefer this height.
- Tall height 18" - 25.5" (7.5" piston). Ideal for assistants who need the elevated position and taller doctors.

Choose from a variety of upholstery colors. We can also customize to match your existing decor.

MicroSurgeon's Chair
with traditional armrests

MicroAssistant's Chair
